Data Center

Gain a resilient, always-on infrastructure that can seemlessly support your changing workloads and organizational needs and objectives.

Manage the data that powers your business.

A changed IT landscape has forced organizations to adapt in a variety of ways and discussions around sustainability, bandwidth, and automation continue to dominate the conversation. And, despite an economy crippling pandemic in 2020, spending on data center solutions shows no signs of slowing down.

End user spending on global data center infrastructure is projected to reach over $200 billion, an increase of 6% from 2020, according to the latest forecast from Gartner, Inc.

INNOV8 works closely with over 50 data center operators around the world to bring you the best solution and support for your needs. We assess your environment, work collaboratively to design the best approach, recommend appropriate providers, and provide project management leadership to deploy and manage your solution throughout it's lifecycle. Compliance, network connectivity, power, redundancy, geographic requirements - it's all part of the solution design that our experts provide before you select the ideal partner.

Features and Benefits

SCALABILITY
Allow your data center and the underlying technology to grow with your organizational needs

BUILT IN REDUNDANCY
2N+1 power implementations, battery/diesel generator backups, and 100% Up-time SLA options
